

Guided Observation Date:

Start Time

End Time:

Student Name:

Purpose: Expose students to the clinical methods and disorder types associated with the practice of speech-language pathology.

*To count towards the CFCC required 25 hours of observation, you must debrief after the experience. **The HIPAA Privacy rule is a federal law that regulates who can look at and receive an individual's health information, including speech-language pathology. By observing these sessions, you must abide by the HIPAA law, which means you cannot discuss your observations with anyone not associated with the observation or CSDI learning experiences. Revealing protected health information to anyone not associated with the session or this class could result in federal charges and penalties.

Speech Disorder		Language Disorder	
Speech Sound Disorder		Preschool Language Disorder	
Childhood Apraxia of Speech		Language Disorder Secondary to Developmental Disability	
Dysarthria		Learning Disabilities	
Stuttering			
Voice			
Pediatric Feeding & Swallowing			

During the observation:

- During speech and language sessions, modeling is a primary strategy used to provide examples of speech and language targets to clients. Identify an example of modeling:
- Describe an example of the client showing response to something the SLP is doing:
- Identify one or two things in the treatment setting that appear to be contributing to the clients success:
- Debrief [include details of who and when]:
